FEATURES

- ✓ Comes with KDT Technique Certification
- ✓ Powered caudal sections for ease of patient positioning
- ✓ Directional preference positioning
- ✓ Lower torso flexion
- ✓ Comfortable/adjustable arm rests
- ✓ Large comfortable breathing slot in the headpiece design
- ✓ Variable retraction spring
- ✓ Axial lateral pulls (lumbar & cervical) for lateral discs
- ✓ Inversion with whole body vibration
- ✓ Bolsterless leg elevation system
- ✓ Extension and flexion in the lumbar spine
- ✓ Gravity assisted positioning for VERY acute patients
- ✓ Advanced axilla post design
- ✓ Height adjustable wing vest
- ✓ Open architecture modality belts
*optional
- ✓ Hand switch to control the elevation and powered sections
- ✓ Single column pedestal lifting system
- ✓ Compact and saves space
- ✓ Includes a video in-service on how to use the features of the table

Neural-Flex Prone Treatment

Only the KDT650 Neural-Flex Technology maintains an axial pull vector while allowing the patient's lower torso to be dropped into deep flexion. The flexion caudal section is fully powered for effortless transition to the pain relieving position.

Armedica Manufacturing KDT650 Table - Distributed by Mircom Products, LLC

Comfortable Headrest with large breathe-through opening

No wing-vest necessary! Pronated Grab Bars and Tricep buttressing

Prone - Comfortable Positioning Easy on the Shoulders featuring Retractable Arm Rests

Neural-Flex Supine Treatment

The KDT650 Table is the only Decompression Table featuring Bolster-less leg elevation with Pelvic Tilt which pre-tensions posterior elements.

The KDT650 Table allows simultaneous patient and table Y-Axis distraction. The Passive Tensioning Reactive Orthopedic Spring controls X-Axis Table motion. Now you can enhance decompression without the danger of increased force. Tension can

be matched specifically to patient morphology. Upper section pivots at L-5 for true upper body Semi-Fowler Positioning (supine) as described in the Kennedy Decompression Technique which allows deep flexion to create the mechanical positioning necessary to help centralize atypically migrating“ posterior discs. A lateral motor mount slide allows lateralization of pull.

Gravity Assisted Supine

The ONLY Decompression Table featuring a bolster-less leg elevation with pelvic tilt which pre-tensions posterior elements.

Axilla Posts hold the patient without the need of a wing vest / thoracic belt.

TENSIONING SPRING

Passive Tensioning Reactive Orthopedic Spring

PATENT PENDING

AXILLA POSTS

Height Adjustable Axilla Posts

Extension Treatment

McKenzie practitioners have known for years that many posterior discs show a directional preference of extension to hyper extension. KDT650 Neural-Flex allows advanced prone extension directional preference positioning which takes advantage of typical migration patterns in posterior discs with respect to their gravitational bias toward the anterior in a non-weight bearing posture. Once mechanical centralization occurs, (nuclear and peripheral) the enlivening effect of axial decompression has enhanced potency.

*Prone - "Reverse Hammock Positioning"
deep lumbar extension with axial distraction*

Powered front and rear sections smoothly transition the patient to a centralization position

Armedica Manufacturing KDT650 Table

Flexion Treatment

KDT650 Neural-Flex Technology can be used for traditional manual flexion mobilizations as well.

www.kdtneuralflex.com

Table Specifications:

Total Length 96"
Width 28"
Elevation 19" to 39"
400 lb. lift capacity
Weight 280 lbs

Antalgic Positioning

KDT650 Neural-Flex Antalgic Positioning allows for the safe and comfortable treatment of acute and antalgic patients who exhibit non-weight bearing relief postures. The fully powered caudal sections allow gentle and effortless positioning enabling you to treat the more acute patient with more confidence.

Inversion / Vibration

Neural-Flex Technology with Inversion and Whole Body Vibration enables the patient with Thoracic problems to be effectively treated. Inversion has been shown to allow unweighting of the thoracic spine as well as the lumbar region. Whole body vibration may assist in the healing of damaged tissues as shown in various studies on the effects of vibration.

*Treat Thoracic problems...
Unload the "entire spine" equally by un-weighting with inversion.*

Suspend the patient with ankle cuffs or via pelvic harness for patients with lower kinetic chain problems

Neural-Flex Whole Body vibration provides and even, comfortable vibration level which may increase healing to certain structures

Inversion should not be used on patients with blood pressure problems or the following conditions: Glaucoma, Pregnancy, Hiatal hernia, Ventral hernia, Detached retina, Extreme obesity, Middle ear infection, Arterial hypertension, Severe vascular disease, Anti-Coagulants (use of), Conjunctivitis - (pink eye), Bone weakness, recent fractures, History of congestive heart failure. History of space-occupying brain lesion, Vulnerable areas of stress from recent surgery.

Mid-Section Lumbar Support

Cervical Treatment

The KDT650 Table provides improved comfort while applying Decompression to the Cervical Spine. The patent pending mid-section elevation allows full support to the lumbar spine while lowering Thoracic kyphosis. This biomechanically correct position enables a full range of cervical angulation. Patients with a defined directional preference as described in the Kennedy Decompression Technique, can be positioned appropriately to allow cervical discs to migrate centrally without an increase in muscular tension.

Neural-Flex Technology

**Lumbar...Prone...Supine...

- Stable Platform!

Included Accessories

The KDT 650 Decompression Table comes complete with everything you need including accessories available through the Kennedy Decompression.

The KDT 650 Table, Traction Head, Clinical Cervical Device, QuickEaze™ Belts, KDT knee bolsters, SlipStop™ Traction Blocks, SlipStop Pelvic Wedge, KDT inversion ankle roll & strap, comfortable max relax face pillow, and half-round positioning bolster (some accessories not shown).

Quickeaze Belting System: Pelvic, Thoracic, and Extender

Cervical Device, Axilla Posts, KDT Course

Traction Blocks

Slip Stop Blocks and Pelvic Wedge

Knee Bolsters, Ankle Bolster, Ankle Roll

Upholstery Colors

- Whisper collection for healthcare
- Ultrasoft leather feel
- Excellent Tailorability
- Superior Wear Resistance
- Soft Hi-Loft Backing
- Mildew Resistant
- UV Stabilized Pigments
- 27 oz. Weight

KDT Technology

The KDT650 Neural Flex Table combines unmatched comfort with elegant design.

The table features several unique patent pending innovations including:

- * Bolster-less leg elevation with Pelvic Tilt which pre-tensions posterior elements.
- * Simultaneous patient and table Y-Axis distraction. www.kdtneuralflex.com
- * The Passive Tensioning Reactive Orthopedic Spring controls X-Axis Table motion. Enhance decompression without added force. Tension can be matched to patient morphology.
- * Upper section pivots at L-5 for true upper body Semi-Fowler Positioning (supine) and true Prone upper body Reverse Hammock position.
- * Lateral motor mount slide allows lateralization of pull.
- * Effortless prone positioning. Retractable/Adjustable arm rests; pronated grab bars and arm butress eliminates slippage without the need for a wing vest.

Add Decompression

Though used for decades, mechanical traction remained a rather primitive modality done with the aid of a simple motorized pull unit. Though effective in some areas, these inflexible units were unable to replicate the nuanced manipulations of the clinician's gentle pulls. As other medical equipment became digitized, computerized, modernized and user-friendly,

mechanical traction's unsophisticated operating system and cumbersome belting configurations remained largely unchanged.

MARKETDecompression.com

The ONLY Marketing Program Created by Doctors of Chiropractic and Endorsed by the Kennedy Decompression Technique

- We are practicing doctors of chiropractic who have "bottle tested" our decompression marketing materials through an expensive "trial and error" process — and who now KNOW what works!
- Sure, you can discover what works and what doesn't work on your own... but why go through that time consuming and expensive process.
- Our marketing materials can be customized for whatever type of decompression system you own.

WHAT OUR CLIENTS ARE SAYING

"Great CD! I haven't more official marketing information in use here between patients reading your information than in 8 months and \$45,000.00 with another marketing company. I can't wait to get started. Thanks!"

“I just finished the finest seminar that I have ever experienced in Chiropractic. I have been to many great ones, in my 50 years as a DC.”

My staff and I just finished a seven hour seminar on the technique. Our two associate doctors as well as our 3 para-professional therapy staff spent a delightful day learning the protocols on the Kennedy Certification Program.

I had a DRX for 3 years---and discontinued decompression in the late fall of 2007. It seemed that many of the DRX patients got great success---but far too many were failure cases. Now, I understand why we were not as successful as the “promo's” suggested we would be. 86% was simply not factual! Well— we learned that some patients should never be treated on their backs---that they are correctly treated on the belly. That there are basic tests that can be conducted that will tell you what position is best. That some cases—the problem is a basic muscular pattern problem and not a disc problem---even though a patient describes similar symptoms. That one cannot simply “push a button” to isolate an upper lumbar disc---and then selectively decompress it.

Finally---as I reflect on the day---I am deeply moved by the research that has gone into the Kennedy Table and the protocols that are now available to our profession. Once the Kennedy “rules of the road” are understood and put to work---a DR. can, with confidence, know what type of case one has and the exact protocol to use to bring about a successful outcome. Frankly---what I was doing with the DRX system was an experiment in traction---and not the refined teaching system that you offer our profession.

When one wants to offer a comprehensive decompression program I believe that they should study all aspects of the systems available. Compare apples to apples. Look at the various systems and the training that is available with each.

I told my Wife this afternoon that I just finished the finest seminar that I have ever experienced in Chiropractic. I have been to many great ones, in my 50 years as a DC, but I believe this to be the most meaningful.

I look forward to being with you this weekend in Chicago, as I work to complete my certification in the Kennedy Technique.

Thank you for this remarkable seminar and opportunity to learn this innovative and breakthrough treatment system.

Sincerely,

DR. Bob Thatcher
St. Paul, MN.
